

MISSION STATEMENT

2022

unicase

Unicase values the world we all share. This is why we actively take responsibility for shaping the kind of world we wish to inhabit and cultivate together. Above all, we value the environment and are deeply committed to accelerating sustainable path toward net zero. Our mission is to do everything possible to help reduce emissions and ensure a cleaner, greener, and more prosperous earth for everyone.

The mission ensues a range of stirring initiatives, all of which are proudly recognised across our organisation. We highlight four key Determined Contributions to limit global warming to below 2 degrees Celsius:

- pursue, welcome, and support sustainable projects, mitigating the climate change
- promote and champion alternative energy sources, including wind, solar, hydro, geothermal, and others, hybrid power plants included
- combat climate change on an individual level; help others to recognise the importance and urgency of climate change and help adapt to its effects
- surface problem areas in environmental policies and legislation across Central Asia

Change in Central Asia must start at the top. Apropos of climate change and environmental sustainability, the region requires huge transformations. These, in turn, require significant economic and social shifts, top-down. No individual contributor can tilt the situation alone, hence our close work with governments and educational institutions: we tear into problems together with government officials and help university students recognise the climate change importance and urgency.

No one can stop the burning of coal, gas, and oil now. What we can do, however, is enhance or redevelop the processes so that they may emit less carbon dioxide. We spark meaningful conversations with lawmakers to further understand our planet's needs. Together, we attempt for feasible regulations, norms, standards, and initiatives to welcome large Renewable Energy Source projects to make the regional economy less fossil-fuel dependent. The Unicase Team contributes to the projects' investment attractiveness, eliminates trust issues, and mitigates risks inherent. A part to our mission is to shift mindsets, attitudes, and actions to allow for serious environmental transformation.

Unicase balances societal need with the need to deliver profit. Alongside the net zero pursuit, our mission pertains to saving lives, making it easier for healthcare providers to help those in need, relieving burdens from forest and land management, and making our shared environment more energy-efficient. We truly live our mission. We minimise air travel, substitute car travel with other forms of public transport, maintain energy-efficient homes, and plant trees in our communities.

Unicase welcomes healthcare developers and providers, renewable energy sector operators and investors, world experts and forward thinkers. Our goal is to make Central Asia healthier, greener, and, ultimately, more sustainable. Five years ago, sceptics thought our work impossible. **At Unicase, we are committed to taking today's aspirations and making tomorrow's reality.**

Taking Today's Aspirations,
Making Tomorrow's Reality
